

Mode Switch Assembly

for use on EGB-10 and larger governors

Description

The Mode Switch is an accessory for EGB governors which indicates whether the electrical actuator or the mechanical governor is controlling. The switch may be wired by the user to provide an audible or visual indication of which portion of the EGB is controlling, or to complete a circuit for some other purpose.

The Mode Switch is mounted on top of the sub-governor case. It is actuated by the mechanical governor power piston when the mechanical governor is inactive.

Wiring

The Mode Switch is wired to the governor connector. The type of indicator and wiring to the governor connector is the user's responsibility.

The Mode Switch is suitable for the following electrical specifications:

- 125 Vac, 15 A
- 250 Vac, 15 A
- 125 Vdc, 0.5 A
- 250 Vdc, 0.25 A
- 24 Vdc, 5.0 A
- 12 Vdc, 5.0 A

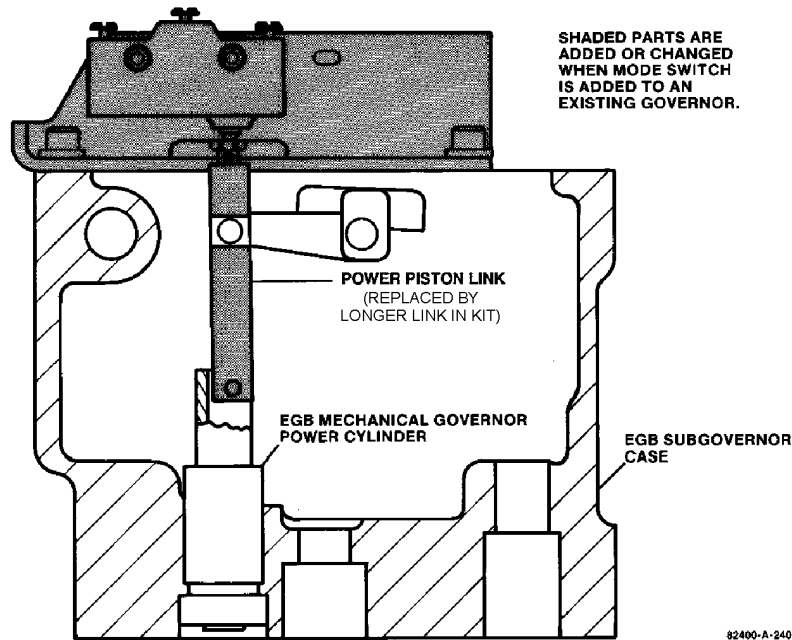

The EGB Mode Switch Assembly includes all of the parts necessary to add a mode switch to an existing EGB governor system.

Installation

The Mode Switch is installed inside the EGB unit and does not change the exterior dimensions of the governor. Some modification of the mechanical governor's power piston linkage is required. Contact a Woodward representative concerning this modification.

- Easily installed on existing governors
- Positive switch contacts for audible or visual indicator
- Simple design
- Accommodates most alarm voltages
- Complete alarm circuit when mechanical portion controls fuel setting

Mode Switch Installed on EGB Sub-Governor
